Spatial information system for Municipalities
Integrity of service for small and large municipalities.

PISO is the most popular geospatial information system used in Slovenian municipalities. At the present moment, over 50%* of municipalities and more than 50,000 registered users are using PISO on daily basis.

*Slovenia's largest GIS for municipalities
over 50% market share

*there are 210 municipalities in Slovenia
Spatial information system for Municipalities
Spatial information for everyone, everywhere, fast and cost effective.

Spatial information system for municipalities is a unique geoinformation infrastructure that is available to all municipalities in Slovenia. Service covers the need for massive and easy access to national and municipal spatial data information and contains solutions to support the business processes of municipality. Centralized approach and solution ensure effective management and minimal cost for municipality.

"PISO is great because of its integrity of service, it is easy to use and in has great user support. That is why it is the perfect solution for our municipality; we are a small municipality and we don’t have our own GIS experts and equipment that is needed for supporting such a system. It is also effective because the solution is constantly developing and supplementing without additional costs to the municipality.”

Milan Šoštarič, Municipality of Braslovče

Municipal and state data
PISO combines municipal and state data in the logical and consistent way. Obtaining and updating data is provided on time and at the same time for all users. Updated information is accessible immediately. Municipality includes additional data gradually and when necessary.

State data
- Land cadastre, register, ownership
- Buildings, floor ownership
- Central population register
- Public infrastructure
- Orthophotography and topographic maps
- Spatial units, Streets and house numbers
- Business register of entrepreneurs
- Register of cultural heritage
- Environmental and agricultural land policies

Municipal data
- Current spatial plan
- Public exhibitons of spatial planning
- Road data
- Studies of the environmental vulnerability
- Vacant construction land
- Traffic signs
- Tourism and other dedicated maps
- Other

Public access - citizens and business
Public access enables municipalities to grant electronic access to the spatial data to the citizens and businesses. In this way the municipalities relieve their departments of issuing official documents and interpret the information.

“PISO is great because it helps you to obtain information regarding the parcels positions, the owners, details of building, municipal equipment, destination, etc... and everything can be saved, printed or sent via e-mail.”

Gregor Petrovič, Municipality of Šmartno ob Paki

Internal access - municipal administration
Municipal administration uses an internal access as a basic working tool for accessing spatial data in one place. Additional functionalities provide information that can not be viewed by public users. The municipality can decide to grant access to the city councils, public services, inspectors and others. Applications for issuing various documents and municipal real estate management could be easily integrated.

Our ready to use solutions are available immediately after becoming a part of PISO services.

Become a PISO member now!

Easy and rapid integration.
Free evaluation period.
Best price offer.
No long-term subscription.
The use of conventional GIS solutions for ordinary users is complex and associated with high equipment and maintenance costs and requires additional training. For the mass and easy access to spatial data the PISO services has been provided within the municipal administration and are regularly used by 50 employees from different departments. Within the public access we enable all the users to access the data of municipal spatial plan, transport infrastructure, vulnerability studies, tourist card, etc. rental costs are lower than purchase of a single license of a commercial desktop GIS solutions."

Zalka Jereb, The Town of Nova Gorica

"When designing the facilities in the baseline we need different sorts of information related to the location of the facility and the fastest and easiest way to find them is the PISO service. Usually we need information about parcels and property development – where the infrastructure line runs. Ortofoto images provide the information about the object, its surrounding and its embedding in area."

Rok Poles, Vegrad projektni biro, Ltd

**Key features**

Being a part of PISO gives you the following advantages:

- A unique infrastructure for all municipalities
- Internal and public access
- Centralized management
- Data updating
- Central resource for state and municipal data
- Easy to use
- Wide availability, local independent access
- No needs for special software
- Operational reliability and security of transactions
- Low price and unlimited number of users

PISO Mobile enables you to work on the field and localization through GPS devices.

"When designing the facilities in the baseline we need different sorts of information related to the location of the facility and the fastest and easiest way to find them is the PISO service. Usually we need information about parcels and property development – where the infrastructure line runs. Ortofoto images provide the information about the object, its surrounding and its embedding in area."

Rok Poles, Vegrad projektni biro, Ltd

**Functionalities**

For the users there are following options:

- Web and mobile browser
- Content modules for state and municipal data
- Advanced location and attribute queries
- Preparation of reports and cartographic content
- Report location
- Coordinate system calculator
- Spatial communication
- Preparation and submission of public users applications
- Integration of location and various documents

**Examples showing the use of land register, a review of urban infrastructure, display floor property in the register of buildings and printing cartographic data for planning information.**

Spatial information system for Municipalities
It’s time to make things easier...

For municipalities that already use any other information system, PISO is a valuable supplement. On the other hand all others can use PISO as basic GIS municipal system.

“With public announcement of the spatial planning documents in PISO on our municipality, we reduced the number of applications for official planning information. Virtually any kind of spatial data can be published in PISO service. Since the updating and upgrading data is implemented in the central system, changes are immediately available to all users without local interventions.”

Goran Semečnik,
Municipality of Velenje

“PISO data is gathered from various state sources, which together with our municipal contents form a compact solution. In the municipal administration PISO service is used as a support for the location information and the implementation of other business processes that are directly or indirectly related to the location.”

Milena Šlajpah,
Municipality of Grosuplje

Integrity service
Municipalities that are part of the PISO services offer the full range of services in the field of spatial data. We are providing the distribution of state data, the creation of digital data and the preparation and updating, consulting, support, training, data analysis, various data processing and realization of other assigned projects.

Realis is a software development company specialized in geographic information system (GIS) and location based services (LBS) from low cost out of the box solutions to large specialized enterprise systems. The team of a highly specialized developers and GIS experts is a guarantee for our professional work and cutting-edge solutions, used by more than 100.000 registered users worldwide.

Price list*
PISO services are charged monthly regarding signed contract. Municipality does not have any additional costs for special hardware and software equipment.
